

E-Candle Easy® Performance and ambiance go hand in hand

The old times and the new come together in the LED variant of the E-Candle Easy. You benefit from the financial and 'green' advantages of LED lighting, while recreating an authentic atmosphere. Ambiance and output go hand in hand. Unique!

When considering LED lighting, are you picturing a cold, inhospitable ambiance?

If so, be prepared to be surprised by our very latest development. The right colour and luminescence have been combined in an LED. The light source and the glass form a single unit thanks to an innovative construction. The beautifully shaped candle that makes your chandelier so original and recognisable continues to exist in all its purity.

Absolute advantages*

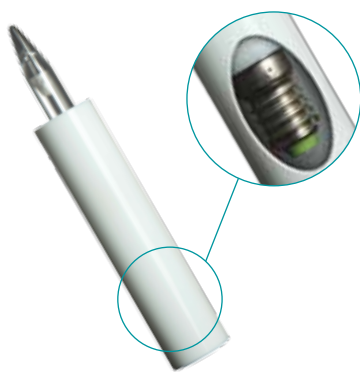

LED lighting has many advantages in comparison to halogen lighting, bulbs and low energy light bulbs. The E-Candle Easy saves energy and has a CO₂ reduction amounting to 60%. It is dimmable, has an extremely long life, low heat generation and is therefore environmentally friendly.

Your classical interior is worth its weight in gold... and your output is coloured 'green'

With the LED variant of the E-Candle you do not compromise the original character of your chandelier. Moreover, the light will continue to set the mood in your rooms while you benefit from a reduction in your costs.*

Installation

The E-Candle Easy has an E14 screw (small cap), so it's easy to change.
